Troubleshooting

Perform the following steps and check after each step if the program functions again.

1. Check if the sensor is properly fastened to the crank (picture 1).
2. Restart the Android Computer.
3. Go back to step 2 (Sensor connection), first disconnect and descelect the sensor, then select and reconnect the sensor again (part 4 and 5 of step 2).
4. Check the battery percentage in 'BLE settings'. In case you encounter '--%', reset the sensor by removing the battery. Replace the batter when the charge falls below 15%.
5. Restart the Android Computer.
6. If the problem has not been resolved, Choose the option 'PraxSpin' and contact your dealer or send a mail to *service@praxtour.com*.
